

Web Design Competition Documentation

1. Project Overview

□ Project title

Explore Nepal Premium

□ Team/member name

Rajan Oli/ Manisha Nepali /Krishna Pd.Dhobi /Susmita Bista

□ Competition Name

REC Diploma Level Hackathon 2026

□ Submission date

June 10, 2026

□ Brief description of the website

“Explore Nepal Premium is a travel platform showcasing Nepal’s destinations, culture, and adventure experiences with premium travel information and guides.”

• Target audience

Tourists, travelers, and people interested in exploring Nepal.

□ Objectives and features

To provide information about Nepal’s tourist places, culture, and travel experiences to help people explore and plan their trips easily.

2. Design process

□ Requirement analysis

We Use Water fall model:

□ Wireframes and sketches

A wireframe will be used in designing our website. This is an illustration of the layout of various contents like images, texts, menus, and buttons on pages such as the home page, destination page, and contact page among others.

□ Site map

- Home
- About
- Gallery
- Contact Us

□ User interface (UI) design decisions

- The website works well on phones, tablets and computers.
- The fonts and buttons and the way the pages look are all consistent.
- There are sections for the gallery and destinations with lots of images.
- The text is easy to read. The pages are set up in a clear way.
- The buttons are interactive. Have nice effects when you hover over them which makes the website more fun to use.
- There is a contact page where you can talk to us and give us your thoughts.

□ The main goal is to make a website about Nepal that's easy to use and nice to look at and accessible, to everyone so people can learn more about Nepal and plan their trip.

□ Color palette and typography choices

The Explore Nepal website uses a luxury-inspired color scheme that represents Nepal's natural beauty, adventure, and cultural heritage.

Color	Hex Code	Usage
Dark Navy	#050816	Main background
Deep Black	#01040d	Footer background
Gold	#d4af37	Headings, buttons, highlights
Light Gold	#f5d76e	Button gradients
White	#ffffff	Primary text
Light Gray	#cccccc	Secondary text
Medium Gray	#aaaaaa	Footer descriptions
Dark Gray	#777777	Copyright text

3. Technologies Used

List all tools and technologies used, for example:

- HTML5
- CSS3
- JavaScript
- Font Awesome, (icons design)
- Google Fonts (font Design)
- Visual Studio Code
- web3forms

Challenges Faced During Development and its Solution

- Challenges
 - The website did not look good on all devices because the responsive layout was not working properly.

- Designing a website for tourism that looks modern and nice was really hard to do.
- It was also hard to make sure all the pages looked the same.
- We did not have a lot of time to work on the website during the hackathon. That made things difficult.
- Solutions
 - We used something called Flexbox. Made sure the website looked good on different screen sizes.
 - The website looks really nice now because we used a color scheme, a font called Poppins and some smooth animations.
 - We used the parts, like the navbar and footer on all the pages so it looks consistent.
 - We saved time by focusing on the important things dividing up the work and reusing some of the code we already wrote for the tourism website, the tourism website and the tourism website.

4. Resources Used

Document every external resource:

Images □ Self-created photographs

□ Copyright-free images from approved sources

□ Proper attribution where required

Icons

Font

• Poppins (font name)

Font Type(Sans-serif)

References

□ Tutorials, articles, and documentation consulted during development
